

USER MANUAL

ABC charger Series

ABC Sealed battery chargers IP-67

FOR LITHIUM AND LEAD-ACID BATTERIES

ABC Series Smart Battery Chargers

The ACES ABC series of high frequency PWM chargers have a compact and sealed structure design, they are suitable for lead acid batteries and Lithium ion NMC or LFP batteries.

They are used to cycle charge or floating charge batteries in electric cars, sightseeing vehicles, patrol vehicles, fork lifts, communication, electric power, boats, Lawn-Mowers, Agriculture Equipment, etc.

Active PFC and LLC new technology guarantee a good Power Factor and a very high efficiency.

The reliable hardware protections and impeccable charging strategies ensure a safe charging process.

SAFETY INSTRUCTIONS AND WARNINGS

- Read always these instructions and warnings before use.
- On the AC mains side always make sure that there is an earth-leakage protection breaker.
- Make sure that on the AC and DC connections is always a circuit breaker or fuse for protection
- Always read the specifications of the battery and connect the charger only to a suitable battery
- Never use the charger in a place where is a risk for gas or fuel explosions
- Do not place the charger outside, but always in a space that has some protection from outside weather influences
- When the charger is installed, a minimum of 100 mm space around the charger is needed.
- Do not place the charger in a small not vented space; the charger will run too hot.
- Check if the fan is operating properly during charging
- Make sure the wires are placed in such a way that they cannot be damaged easily.
- If the charger is used for electric vehicles like cars or boats, the interlock connection shall be used to prevent the propulsion motor from starting during charging; If the charger has a CAN-bus this can be accomplished by CAN message.
- The Lithium Battery must have a BMS protection with balancing of the cells
- The Lithium version of the charger will not charge below 0 °C; only a special LFM model will charge below 0 °C
- Never charge dead or damaged batteries
- Do not attempt to disassemble the charger

INSTRUCTIONS FOR USE

- Check before use if there is no damage due to transport and if the charger is complete
- If possible stick the NTC temperature sensor close to or on the battery; for small chargers it is on the charger itself
- Connect the charger to a suitable battery with correct chemistry and voltage
- Connect the charger to the correct mains voltage
- After connection the charger will start charging automatically if the battery is not full
- The leds on the charger will show the status of the charging process
- The battery is now charged according the charging curve.
- For the LFP lithium batteries the end-voltage will be reached only when the battery cells are fully balanced; after charging to full the charger has a battery balancing phase that can last up to 3 hours.
- Except the ABC300 the Charger must be regularly maintained, the air-flow slot under the green plate must not be blocked, all dust and dirt substances must be cleaned.

MODEL RANGE OVERVIEW

144-168V									
Model >	300F	450F	700	720F	900F	1350	2000	3300	5000

This table shows the VI range of chargers; this user manual is limited to our standard models ; models with "F" are universal AC-mains

The ACES battery chargers can be used for following battery types:

- LA series: Lead acid batteries AGM and Flooded (models for GEL are optional)
- LI series: Lithium Ion NMC or NCA batteries (optional)
- LF series: Lithium Iron Phosphate (LFP) batteries; These chargers have a unique cell balancing mode

Charging protection <0 °C	-	Yes	-	Yes	-	Yes
Temperature compensation	Yes	-	Yes	-	Yes	-
AC input voltage range (Vac)	85~265					
Nom. AC input voltage (Vac)	110/230					
AC input frequency (Hz)	45-65					
AC input rated current (A)	<3.3A @ 100VAC; <1.5A @ 220VAC					
AC Power Factor	> 0.99					
Efficiency (typ.)	87% @100VAC, 92% @ 220VAC					
Noise Level	< 30dB					
AC Input connection	EU plug (Default); EU plug, UK plug, US plug, AU plug, SA plug, FR plug, Israel plug are option					
AC Input cable	1.0m length black 3x1mm2 Power cable					
DC Output connection	SB50 default; M8 ring-terminal and Alligator clip are on request					
DC Output cable	1.2m length black 2x14AWG					
Temp. Sensor Cable	110 mm length temp. sensor covered heat shrink tube together with output cable					
Interlock protection	Default no interlock function, but can be customized					
CAN bus function	No					
LED Indicator	On the charger					
Cooling	Non-FAN type, Natural convection					
IP Protection rating	IP67					
AC under voltage protection	When AC voltage <85Vac the charger will switch off					
Over current protection	Yes; auto restart					
Short circuit protection	Yes; auto restart					
No-load protection	yes					
Battery reversed protection	yes					
Temperature protection	The charger can operate up to 45°C and will de-rate the charge current linearly to 50% when reaching 60°C. When the case reaching >65°C the charging is will stop, after temperature decrease it will automatically resume. By NTC temperature sensor					
Temperature compensation	For the lead-acid charger the NTC is used for temperature compensation at -4mV/°C per 2V cell For the Lithium charger the NTC is used to prevent charging < 0 °C ambient temperature					
Dimensions (mm)	187 x 123 x 64.5

DC Output connection	Default SB50; M8 terminal, Alligator clip are option							
DC Output cable	3m length black 2x10mm ² dc cable (2 wires in 1 black wave tube; heat shrinkable tube at ends)							
Temp. Sensor Cable	1m length temp. sensor 2x0.5mm ² wires							
Interlock protection	Yes, open contact if charger is connected to AC-mains; 1m length 2x0.5mm ² Grey, Green wires with 2 pin Interlock Jack							
CAN bus function	Default no CAN function, but can be customized							
AUX PSU	Yes, option, 200mA/12V							
Bluetooth APP function	Yes, option							
LED Indicator	On the charger and 1m length 3x0.5mm ² wires with 3 pin extension Jack for optional external indicator							
Cooling	FAN cooling; The Fan rotates at charging and stops after fully charged; Green RAL6024FAN cover plate to protect							
IP Protection rating	IP67							
AC under-voltage prot.	When AC voltage <150Vac input the charger will switch off							
Over current protection	Yes; auto restart							
Short circuit protection	Yes; auto restart							
No-load protection	yes							
Battery reversed prot.	yes							
Temperature protection	The charger can operate up to 45°C and will derate the charge current linearly to 50% when reaching 60°C. When the case is >65°C the charging is will stop, after temperature decrease it will automatically resume.							
Temperature compensation	By NTC temperature sensor; For the lead-acid charger the NTC is used for temp. compensation at -4mV/°C per 2V cell For the Lithium charger the NTC is used to prevent charging < 0 °C ambient temperature							
Dimensions (mm)	282 x 167 x 95.5							
N.W/G.W (kg)	3.5/5.4

Temperature protection	The charger can operate up to 45°C and will de-rate the charge current linearly to 50% when reaching 60°C. When the case reaching >65°C the charging is will stop, after temperature decrease it will automatically resume.					
Temperature compensation	By cable with NTC temperature sensor. For the lead-acid charger the NTC is used for temp. compensation at -4mV/°C per 2V cell. For the Lithium charger the NTC is used to prevent charging < 0 °C ambient temperature					
AC Input connection	Black AC cable 2m 4 wires; (optional CEE 4P+E red plug IEC60309 or customized)					
DC Output connection	Output red / black DC 3m 16mm2 cable with Anderson SB175 grey connector					
Cooling	FAN cooling; The Fan rotates at charging and stops after fully charged; Green RAL6024 FAN cover plate to protect					
Dimensions (mm)	419 x 281.5 x 100.5					
N.W / G.W (kg)	18 / 20					

GENERAL SPECIFICATIONS FOR ALL CHARGER MODELS

SAFETY, EMC AND ENVIRONMENT

Safety test AC to DC	$\leq 20\text{mA}@2000\text{Vac}/1\text{min}$
Safety test AC to CASE	$\leq 20\text{mA}@2000\text{Vac}/1\text{min}$
Safety test DC to CASE	$\leq 20\text{mA}@1000\text{Vac}/1\text{min}$
Interlock contact	Open contact if charger is connected to AC-mains; Max 1A / 30V
Safety	IEC 60335-2-29:2016; IEC 61558-1-2019
Insulation Resistance test	AC to CASE > 100MΩ/DC 500V
EMC	EN 55014-1:2006; EN 55014-A2:2011; EN 61000-3-2:2014; EN 61000-3-3:2013 EN 61000-4-2/3/4/5/11
CE marking	Yes
Working ambient temp.	-20 ...+45°C ; 45...60°C linear de-rating to 50%
Storage temperature	-20 ...+60°C
Humidity	20...90 % RH

LED INDICATORS

LED Indication Label	For Li Battery	For LA Battery
Battery Capacity Status	In Charging: Red light flashes Fully Charged: Green light is lighting	Red LED flash per second, to show capacity < 80% Yellow LED flash per second, to show capacity > 80% Green LED lights constantly, to show capacity = 100%
Non Load Status	R,G,R,G,R,G	
Fault Status (“-“: means pause)	Over-volt/current protection: flash R, G, R, -, -, - Ambient temperature too high or low: flash R,G,R,G, -, - Over temperature: flash G,R,-,-,- Output under-voltage: flash R,G,-,-,- Input AC voltage abnormal: flash R,G,R,G,R,- Other faults: flash G,R,G,-,-,-	
Fully charged	Green LED lights constantly	

WARRANTY

Warranty will be granted according ACES Energy Warranty Conditions 24 months from the date of purchase.

No warranty will be provided when:

- Product failure due to improper use
- Product damage due to bad environmental use and natural disasters.
- The product is repaired by unauthorized persons
- Product appearance has obvious deformation, incomplete, other damage

GENERAL

- **Installation Type:** Portable or On-board usage, except the ABC300 it has a green FAN cover plate on the top side to protect the FAN and a blank aluminum bottom bracket with installation holes that shall be used for onboard EV.
- **Accessories:** Handgrip + 2 screws in separate bag; for some models also Interlock connector and/or LED extension cable.
- **Packing:** One 3-layer carton box with EPE foam protection, on carton outside has a carton label, the content of Carton label include Model, Max. Charging voltage, Charging current and Series number with 1D Bar-code (The Series number with 1D Bar-code must match the inside product).

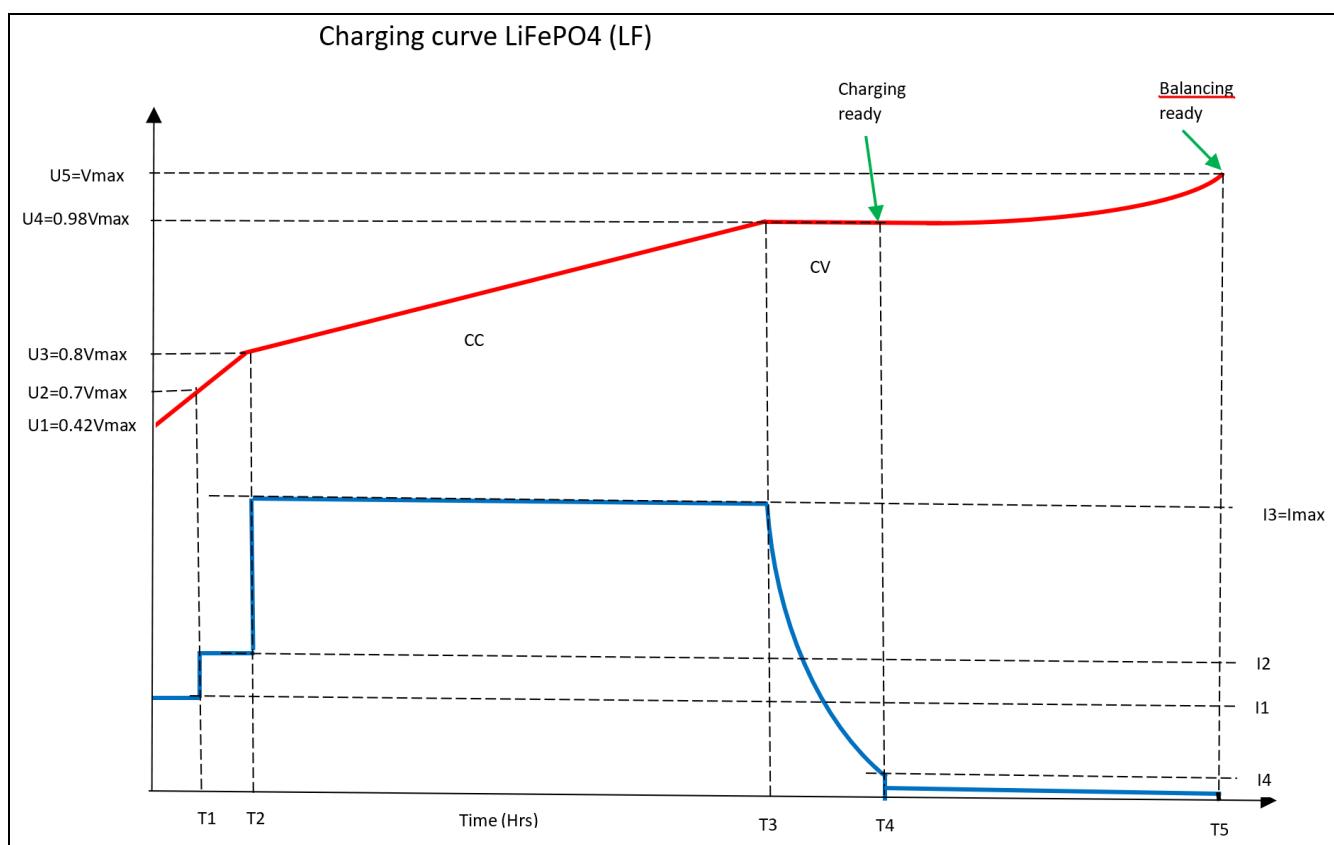

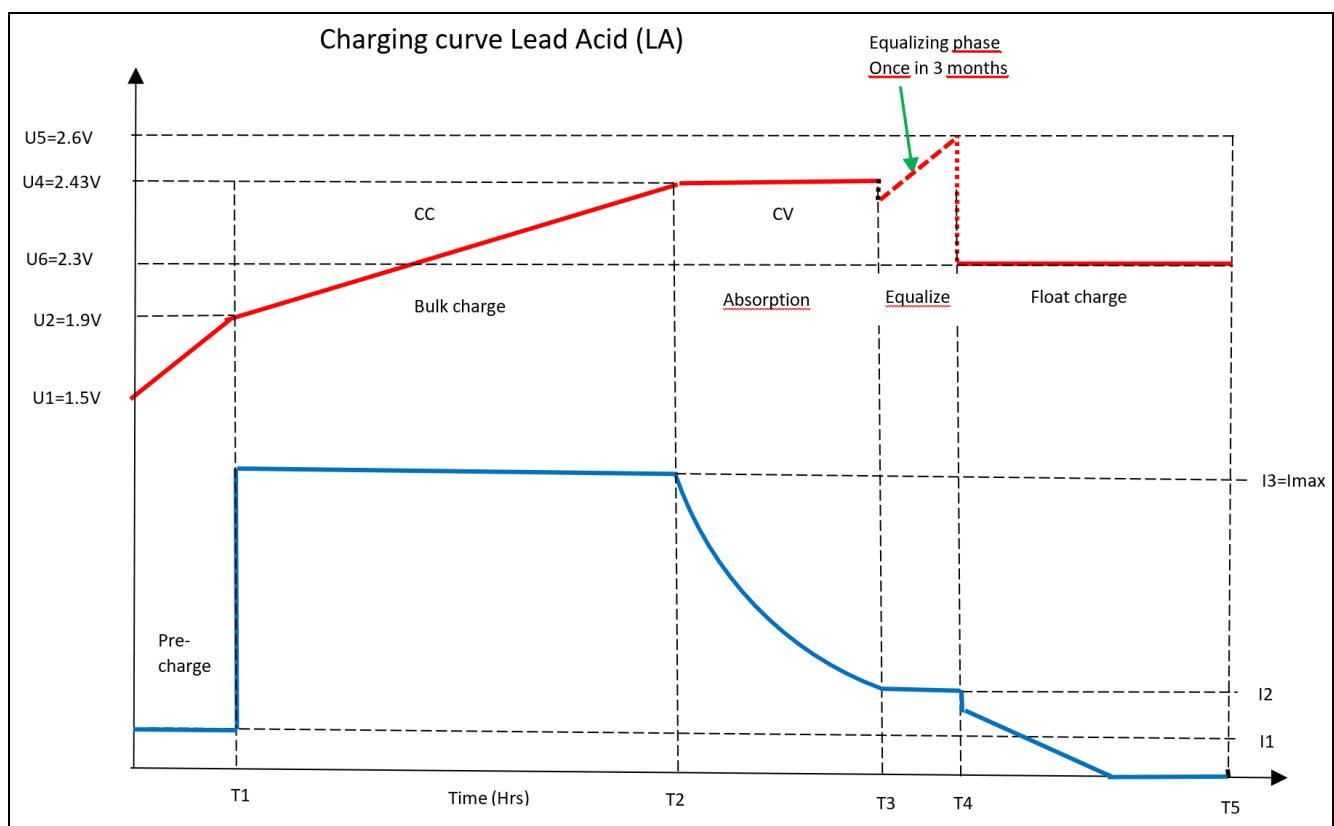

See label example:

Model: ABC300-7235LI
Charging Voltage: 84V
Charging Current: 35A

Serial No: ABC3000-000000

■ CHARGING CURVE FOR Lead-acid (LA) and LiFePO4 (LF) batteries

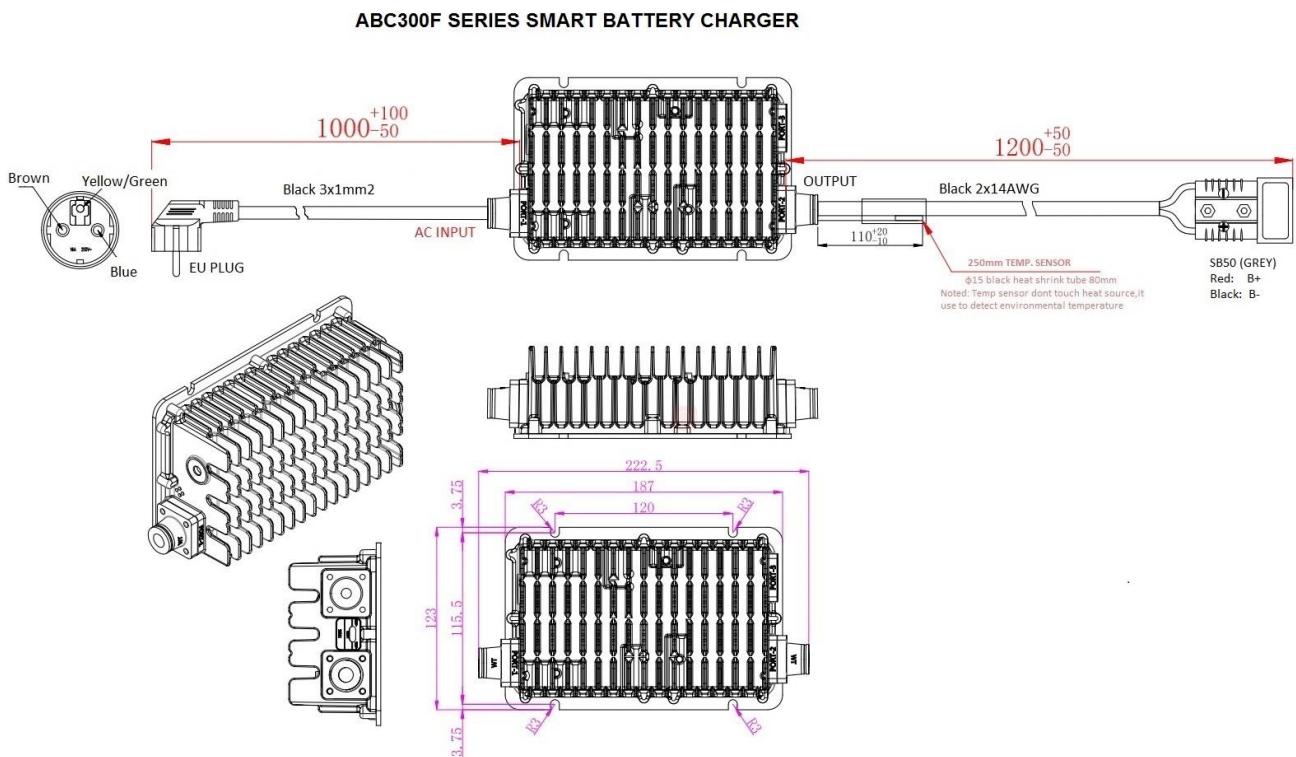

■ COMMON FAULTS AND SOLUTIONS

LED Indication Status	Fault Indication	Solution
R, G, R, G, R, G	No Load connection	Check the connection between charger and battery, whether B+,B- polarity reversed, whether battery voltage lower than start voltage
R, G, R, -, -, -	Over Voltage/Current	If restart the charger still can't fix, the charger failed, return to repair
R, G, R, G, -, -	Environmental Temp over-heat or too low	Check whether temperature around the charger too high, whether the FAN rotate normally, whether the heat emission slots under the FAN cover blocked, whether environment ventilation isn't good, check the temperature sensor probe...etc
G, R,--,--,--	Charger over-heat	Check the temperature as upon
R, G,--,--,--	Output under-voltage	If restart the charger still can't fix, the charger failed, return to repair
R, G, R, G, R,-	Input AC voltage abnormal	Check Input AC voltage need charger spec, also check AC plug connection
G, R, G,--,--	When one of upon 5 faults repeat 5 times, the LED shows status	Unplug the AC power and re-power on the charger, to see which fault item match, fix it accordingly.

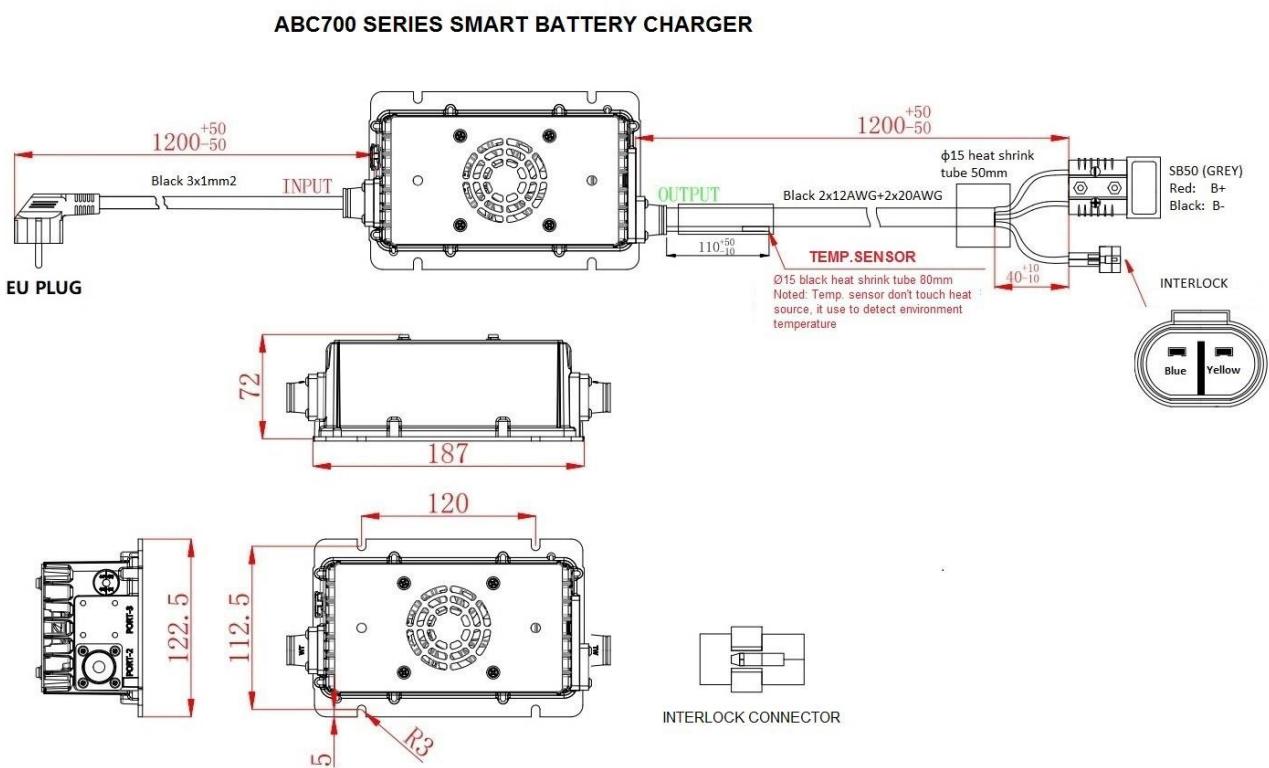

Note: (“-“: means pause)
